

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

Claims 1-29 (Canceled)

30. (Original) A dynamically configurable retroreflector comprising:

first and second flat mirrors, fixed at a particular included angle with respect to one another, said first and second flat mirrors defining an intersection axis;

a third flat mirror mounted for rotation about a rotation axis parallel to said intersection axis; and

an actuator coupled to said third flat mirror configured to provide first and second angular positions about said rotation axis, said first angular position being such to define an included angle of approximately 90° between said first and third flat mirrors, said second angular position being such to define an included angle of approximately 90° between said second and third flat mirrors.

31. (Original) A configurable retroreflector array comprising:

a support element having first and second mounting surfaces lying in planes defining an angle therebetween of approximately 90°.

first and second MEMS micromirror arrays disposed on respective first and second substrates, mounted to said first and second mounting surfaces of said support element;

a given micromirror in said first array being associated with a plurality of M micromirrors in said second array; and

an actuator coupled to each given micromirror in said first array to provide M discrete orientations of said given micromirror, each orientation directing light along an incident direction toward a different micromirror in said second array;

said plurality of M micromirrors in said second array having respective orientations such that each respective orientation is substantially 90° to the orientation of the

given mirror in said first array when the given mirror is oriented to direct light to that micromirror in said second array.

32. (Original) The configurable retroreflector array of claim 31 wherein:  
said support element is a V-block having support surfaces facing toward each other; and

said first and second arrays are mounted with said first and second substrates disposed between the micromirrors in the arrays and said first and second mounting surfaces.

33. (Original) The configurable retroreflector array of claim 31 wherein:  
said support element is a prism having support surfaces facing away from each other; and

said first and second arrays are mounted with the micromirrors in the arrays disposed between said first and second substrates and said first and second mounting surfaces.

34. (Original) The configurable retroreflector array of claim 31 wherein the micromirrors are limited to deflections on the order of  $\pm 10^\circ$ .

Claims 35-37 (Canceled)
